

1. Cut out the sheet so you have this (if your printer doesn't align perfectly hold the sheet up to the light or a window and make sure you are not cutting off any of the text.)

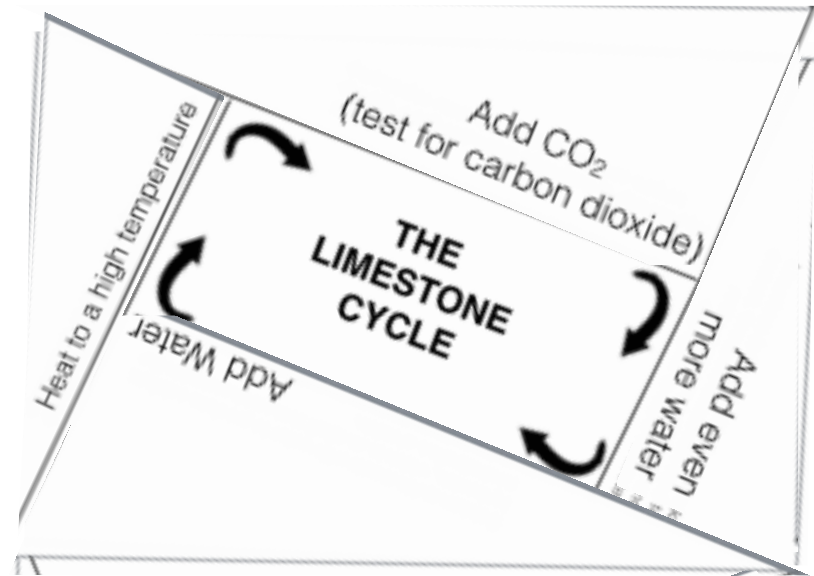

2. Fold along these (red) lines

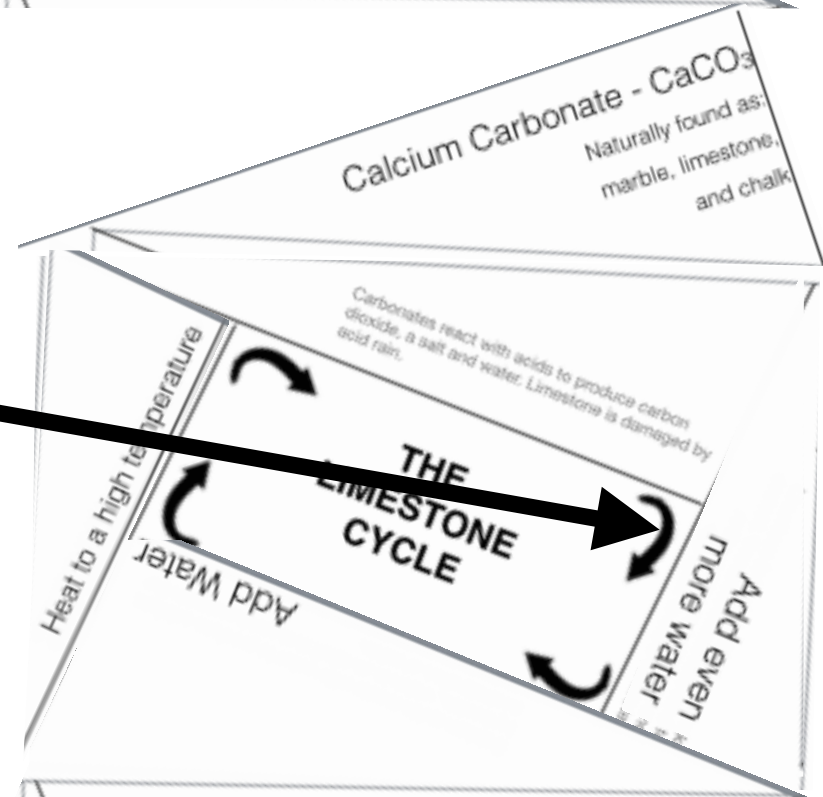

3. Glue the blue section down into your book

4. Folded it should look like this.

5. Open one flap - eg CaCO_3 , follow the arrow to see what happens when you add water by lifting the next flap.

6. I then use these in lessons by going straight into exam question practice having the pupils 'discover the answer by lifting the appropriate flap.'
